

## CORONA: A SIMULATION STUDY

### Conclusion:

1. Service providers are the main culprit because if there are relatively more number of the service providers in a town, then that ODD-EVEN strategy(TC) works best, point to be noted here is it works even better than T33.
2. If the number of service providers is low in a town then TC won't be that good. In that case, T33 indeed would be the best option.
3. If there are a high number of people who are initially affected, then TC is our last hope, which indeed is not much effective, but still better than T100, T50 and T33.
